

## AD Toolbox Setup Instructions for New, Reformatted, and Crashed Computers

If it has been a while since you **Setup** the AD Toolbox on your computer, chances are you will not remember what to do if you have to start over. Getting **Setup** is pretty simple if you follow these instructions:

Put any AD Toolbox **disc** in your computer's **DVD drive**.

After a few seconds, the following **menu** window should automatically appear.

Click on "Browse DVD Files" button

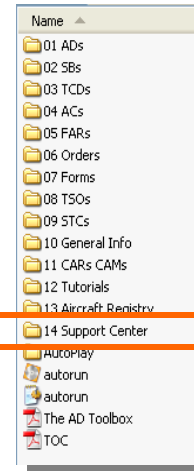

If the autorun feature on your computer is turned off and you **do not see** the above menu window, you can double-click on "**My Computer**", then double-click on your "**DVD Drive (D:)**".

Using either of the above methods, will open an Explorer window showing a **list of folders** and files.

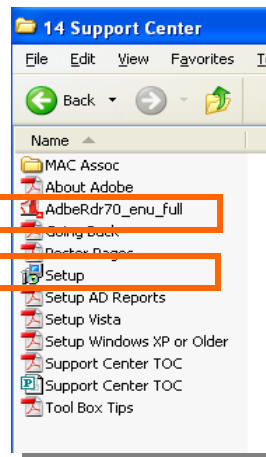

Double-click and open the "**14 Support Center**" folder.

Within the "**14 Support Center**" Folder there are **TWO** program installation files that need to be run to setup your computer for the AD Toolbox programs:

Running the "**AdbeRdr70 ...**" file will install Adobe Reader Version 7 (Recommended Version) for the information files. Double-click & Install Adobe Reader.

Running "**Setup**" will install the Filemaker Runtime program for AD Compliance Reports. Double-click & Run Setup.

After the above steps have been completed, the AD Toolbox should be ready to run. For further Adobe Reader **Version** information, we recommend reading the "**Go Back Help**" information available at the top of most pages.

All current Toolbox Tips are available on the DVD disc by clicking the "**Support Center & General Help**" drawer. For further assistance, contact us any time by calling (803) 696-1041 or by email at [help@zookaviation.com](mailto:help@zookaviation.com).
