

If Links (To Other Screens) Are Not Working

If clicking on the “Drawer” links on the Big Red Toolbox Menu does not take you to another program screen, it is most likely because the program is **not running in Adobe** (Reader or Acrobat).

You can easily see which program is running by looking at the top border of your window.

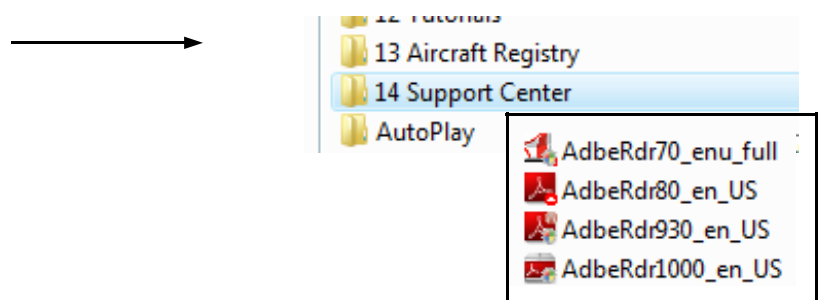

If the AD Toolbox Menu is not set to open in either Adobe Reader or Acrobat, your computer may instead be trying to use another program, such as **PDF Complete** or even a web Browser such as **Mozilla Firefox** and **Microsoft Windows Internet Explorer**.

If you already have an Adobe Reader or Acrobat on your computer, you can train the AD Toolbox to use it by opening a directory and Right-Clicking with your mouse on any .Pdf file, choosing “Open With”, and selecting either Adobe Reader or Acrobat.

If your computer is new or has recently been reformatted (cleaned off) and does not have Adobe Reader or Acrobat installed, you can open the “14 Support Center” folder on the AD Toolbox DVD, then choose and install any Adobe Reader Version 7 through 10.0.

Toolbox Tips and Instructional Videos are available on the DVD disc in the “Support Center & General Help” drawer, and on our website (zookaviation.com) by clicking on the “Support” tab.

For further assistance, contact us any time by calling (803) 696-1041 or by email at help@zookaviation.com.
