# Setting File Associations in VISTA for the IADCRT

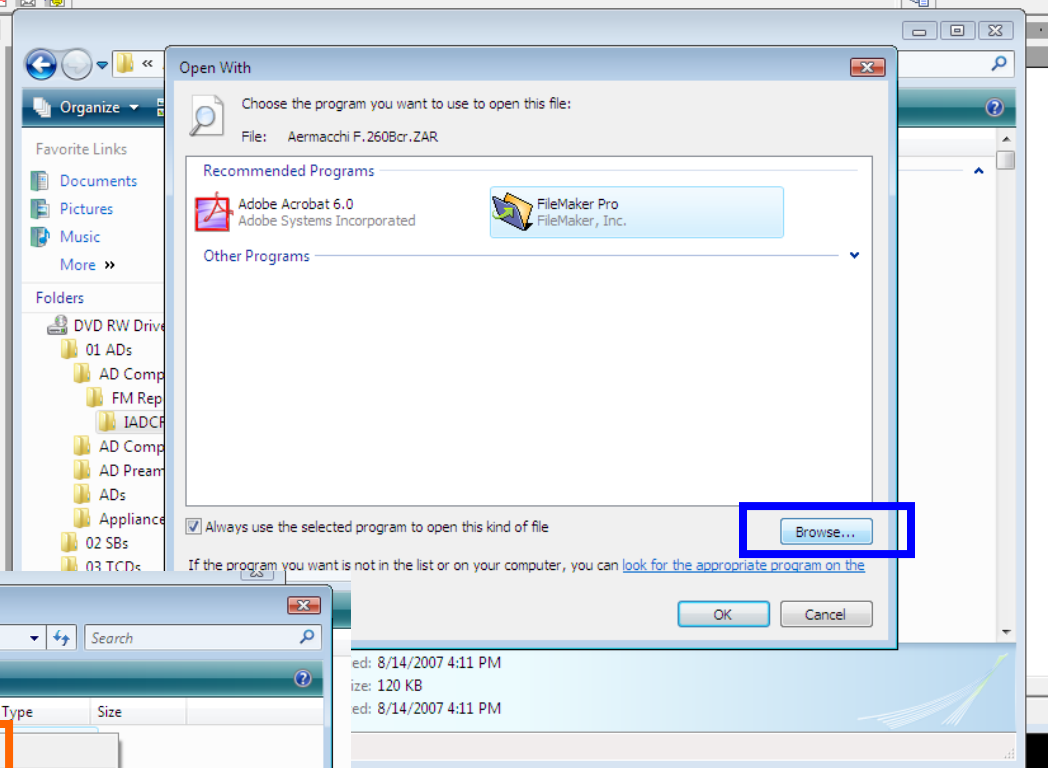

Click on the **Browse DVD Files** button on the AutoRun Screen.

Locate the IADCRT Folder by **following the illustrated path**.

Once you are inside that folder, right click on an Aermacchi file and choose **Open With → Choose Default Program.**

On the "Open Width" dialog box **click on the "Browse" button**.

On the next window that appears, **navigate to the IADCRT folder** like you did earlier. **Begin by clicking on Computer**.

Once you've located the appropriate folder, you should see a single file called IADCRT.

Right click on it once and **choose Select from the drop down menu**.
